

PRANAY PATODI

Washington, DC | (202)-714-4596 | pranay@gwu.edu | linkedin.com/in/pranay-patodi | github.com/pranay-343

EDUCATION

The George Washington University, Washington, DC, Master of Science in Computer Science, **GPA: 3.7/4** **May 2021**
Courses – Analysis and Design of Algorithms, Big-data and analytics, Artificial Intelligence, Machine Learning, Neural Networks
Rajiv Gandhi Proudlyogiki Vishwavidyalaya, India, Bachelor of Engineering in Computer Science, **GPA: 7.7/10** **May 2018**
Courses – Data Structures, Object Oriented Technology, Cloud Computing, Database Management System, Operating Systems

TECHNICAL SKILLS & CERTIFICATIONS

- **Programming Languages:** Python, Django, R, ReactJS, HTML5, CSS3, JavaScript, GraphQL, C and C++
- **Database Languages:** MySQL, NoSQL, PL/SQL and SQL
- **Cloud Based Services:** AWS (EC2, S3, RDS, DynamoDB, Lambda, Athena, Glue, Transcribe, Redshift), GCP
- **Tools and Libraries:** Tableau, PySpark, Python Libraries (Tensorflow, Spacy, Pandas, Numpy, Scikit Learn, OpenCV, Keras) and Rest APIs
- **Certifications:** AWS Certified Cloud Practitioner, Microsoft Technology Associated for Database Administration Fundamentals (2017)

WORK EXPERIENCE

Research Assistant at The George Washington University **January 2021- Present**

- Implemented DNN on omics dataset on metabolites, microbiomes and proteins for analysing severity of COVID-19
- Applied statistical and machine learning techniques to analyze EHR and biological data related to COVID-19
- Cataloging of relevant literature, in-depth review and reporting concerning methodological aspects of selected literature of excess mortality after natural disasters.

Data Analyst Intern at Virtual Emerging Technology Solution (V-ETS), LLC, Washington, DC, USA **June 2020-November 2020**

- Applied Regression, Predictive Analytics, Deep Neural Networks and Big Data approach to generate insights to healthcare data
- Architected big data ETL pipelines using AWS Services to process, clean and ingest semi structured data
- Performed data preprocessing, visualization and analysis using Python, AWS Athena, AWS glue and Tableau
- Lessened cost and usage by 27% of AWS Cloud services and performed data migration between salesforce and AWS

Software Engineer Intern at Bankey, LLC, Washington, DC, USA **March 2020-June 2020**

- Supported in frontend design by creating new components, developed and integrated money transfer in current software without bank account. Documented software requirements to help engineers and stakeholders understand the underlying technology

Software Engineer at MMF Infotech Technologies Pvt. Ltd., Indore, MP, India **January 2018-June 2019**

- Identified and accomplished necessary development tasks to meet company goals and commitments
- Assisted developers, analyst and designers in recognizing and augmenting new applications
- Facilitated in preparation and documentation of program requirements and specifications

Software Engineer Intern at MMF Infotech Technologies Pvt. Ltd., Indore, MP, India

- Created a Chatbot utilized for an E-commerce platforms to allow users to search products according to interest and provide response to FAQ's. It utilized NLP leveraging google library Dialogflow
- Succeeded in exploring possibilities of a chatbot. Training and optimizing bot to make more natural conversations

TECHNICAL PROJECTS

Speech Emotion Detection (Python, Keras, Tensorflow) **July 2020**

- Devised CNN model to detect emotion of a person by analyzing speech signals from audio
- Trained model on SAVEE dataset to predict/detect 7 emotions of a person
- Deployed Linear regression and recursive feature elimination to transform data for better accuracy. Reduced training time by 35%

Health Chatbot (Python, Tensorflow, Spacy, Keras, Neural Networks) **May 2020**

- Developed retrieval based chatbot for health app for logging daily calories intake by user in meals
- Formulated a food recommendation engine to monitor daily calorie intake and suggest meal from 10000 recipes
- Automated meal logging, trained model for identifying food entities, fetching relevant information from user input

Predicting Term Deposit Subscription (Python, Tableau) **April 2020**

- Predicted likelihood of clients subscribing to a term deposit plan offered by a bank
- Build a Naive Bayes, ANN and KNN based classification model with 87% accuracy to identify potential customers for term deposit plan in order to effectively plan marketing campaigns

Predicting Chronic Kidney Disease (CKD) (Python, Excel, Tableau) **April 2020**

- Analyzed the likelihood of CKD in a dataset of 11572 patients
- Predicted CKD risk with random forest, backward selection and logistic regression
- Developed an easy-to-use screening tool in Advanced Excel

ACHIEVEMENTS AND EXTRA CURRICULARS

- Participated in Indore International Model United Nations Conference, 2017
- Enthusiastically volunteered Rahgiri and managed backstage activities to conduct event smoothly
